

AutoPower[®] Technology

Gulfstream Expertise

Introducing the advanced,
speed-control technology of AutoPower[®]
Now available the for G200, expertly installed by Gulfstream

Meet Your New CO-PILOT

Any pilot will tell you, efficiently managing power settings, fuel levels and an array of other cockpit factors is challenging to say the least. That is why Gulfstream is proud to offer the availability of AutoPower®, an advanced cockpit technology that reduces crew workload while still achieving improved performance and situational awareness.

AIR-SPEED CONTROL? **Precisely.**

AutoPower® is an automatic throttle system now available from Gulfstream to G200 owners and operators. This advanced technology, created and manufactured by Safe Flight Instrument Corporation, provides precise air-speed control and engine-target settings using a smooth, pilot-in-the-loop thrust lever control. By managing N1 for takeoff, climb and speed control, AutoPower® delivers greater passenger comfort, quieter cabin environment, increased payload/range potential and fuel savings.

INSTALLED BY **Gulfstream**

Who better to install AutoPower® in your G200 than those who know it best? Gulfstream is a FAA authorized installer. Our facilities are industry renowned for expert, efficient, exacting service across our entire fleet making Gulfstream the best choice when the time comes for installation in your G200.

**Automatic Throttle Systems are installed in more than
9,000 commercial, corporate and military aircraft.**
- Safe Flight Instrument Corporation, 2008

AutoPower® ADVANTAGES

- Precise speed control achieved automatically resulting in a more efficiently run cockpit
- Servo thrust lever positioning for optimized profile performance and reduced crew workload
- Intuitive operation fully integrated with existing avionics displays / controls
- AOA-referenced speed protection

Operational EFFICIENCIES

Reduces Crew Workload

- Speed control for cruise, descent, approach and landing
- Automatic thrust lever adjustment to compensate for fuel burn in cruise

Enhances Flight Safety

- Improves situational awareness
- Provides stabilized approach and landing

Potential Fuel Savings

- Extends range

Required Time of Arrival

- RTA speed management - future growth

AutoPower® is a Registered Trademark of Safe Flight Instrument Corporation.
