# PLANEBOOK

## Carrying, Using and Maintaining Your Pilot's Manuals Just Got Smaller – Faster – Better

At Gulfstream, part of remaining The World Standard® means consistently staying at the forefront of evolving cockpit technology. It is with that philosophy that we developed PlaneBook, the newest advance in flight deck information architecture that provides numerous enhancements both in and out of the cockpit.

PlaneBook, engineered by Gulfstream pilots and technical writers, provides the ultimate paperless cockpit solution. If you decide to go paperless, you'll want to do so utilizing intelligently linked documents that provide simple and fast navigation across the complete suite of pilot's manuals. This is accomplished through the use of the technologically linked version of the Quick Reference Handbook (QRH). Imagine all of the information you need exactly where you expect to find it, just the click of a link away. You may add to that capability the elegant integration of approach charts and maps, and you have everything you need to get you there. Out of the cockpit, at your destination, PlaneBook serves as a wireless personal laptop during layovers. Once you try it, you'll never go back.

**It Not Only Improves Getting You There  
It Goes with You When You Arrive**

ALL THE INFORMATION YOU NEED - AND MORE - ALL IN ONE PLACE. JUST TOUCH THE SCREEN AND GO.

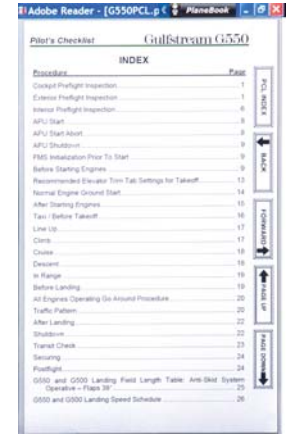

## Gulfstream PlaneBook Diagram

Having the very latest in electronic document management tools affords instant access to your copy of Gulfstream's Flight Crew Reference Library and the exclusive, newly developed ability to download the latest, approved revisions from the internet, ensuring that your publications are always up-to-date. PlaneBook comes to you with documents, hardware and utilities as standard.
